

LEY BOT

D21IT176: Ishan Kansara D21IT183: Smit Anam

2nd year Information Technology, Smt. Kundaben Dinsha Patel Institute of Information Technology Charotar University of Science and Technology, Anand, Gujarat, India

Guided by: Prof Arkesha Shah

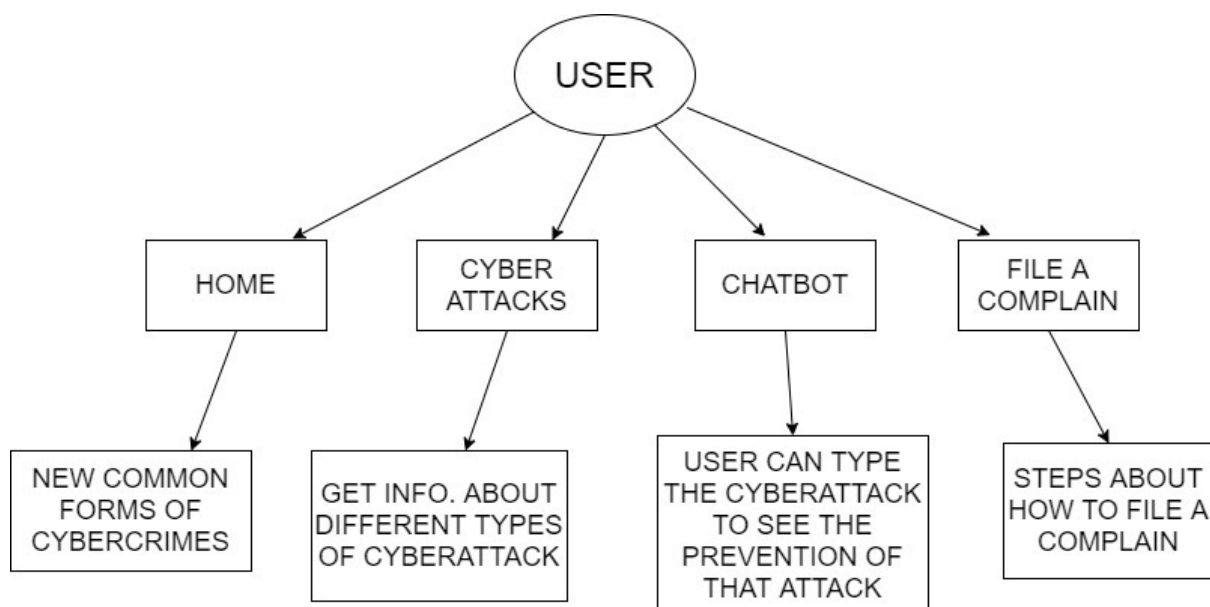

Abstract: This project is named as a Ley Bot. This is a kind of Chat Bot, a chatbot reached people to guide themselves a website but ley bot will help people to guide and protect themselves from cyberattacks. This Ley Bot will help and interact with the users to protect themselves with easy and quick access.

Introduction: In this project we are making a unique chatbot, which helps people to know about the common Cyberattacks which are performed. This chatbot will help people

know about Cyber Attacks and will guide people to protect themselves if it takes place. It will included in the informative website which guides and help users to surf and get information about the Cyber Attack.

Ley Bot will help to interact with an individual by using the keywords such as help spoofing, phishing, I am attacked using spoofing attack etc. The bot will respond accordingly and further the bot will respond according to that Keyword. Building **legal** industry **bots** can save the time, money and improve the experience of the users. Lawyer Bots Bots are providing legal help and access justice to the masses.

Keywords: Ley Bot, Help, Cyber Attacks and Cyber Crime. Different Languages used in these project are HTML CSS and Java script.

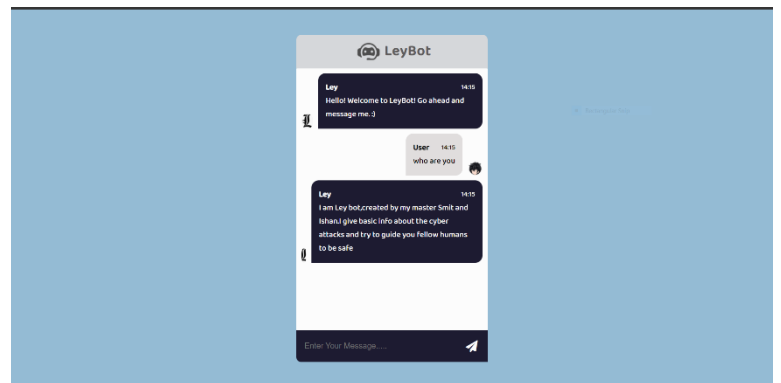

This is the Home page of our Website
from here the users can get the idea
about the common forms of the Cyber Crime.

In this page user will able to get information
about the common forms of Cyber Attacks
such as: Phishing, Malware, SQL Injection...

Chat Bot: User can enter the
Keyword (Name of the Cyber
Attack) Bot will reply the
Prevention of that attack.

Here are the following steps
How to file a, Complain Online
Explained in Two Different
Languages Hindi and Gujarati.

Conclusion: So, in conclusion I have created a project which can save the time, money and improve the experience of the users.

Offering: Access anywhere and Quality legal help. Monetization: Free of cost for the user end.
